1. Preface by the director

In this first multimedia year report you can not only take knowledge of the activities the Foundation PAZ Holandesa has realized in the past year, you can also watch our video's. This way, we hope to present you a more dynamic image of our projects and activities in Arequipa. We keep our website www.pazholandesa.nl updated and here you can read and watch the latest news, photo's and video's.

Due to the problems with the Regional Government of Arequipa concerning the agreement to finish the construction of the children's hospital Tony Molleapaza Rojas and the promised donation of the medical equipment that is short, we only could carry out two surgery projects. During these campaigns, 80 children underwent an operation. After ten years organizing these projects, these operations may seem a routine procedure; nevertheless the parent's happiness with the results of the child's surgery continues to cause emotions, gives energy and motivates us to even help more children.

Although we did not manage to finish the children's hospital in 2009, we were able to move all our polyclinical activities to the new spacious location. Post surgery care, as a part of the integral treatment, is one of our extra values we offer to our patients. The free treatment does not only consist of several corrective surgeries spread over several years, but also includes speech lessons, dental care and psychological counseling for both parents and patients. In 2010, we will put more emphasis on supplying information to the parents by organizing workshops and other activities.

We aren't lacking in new initiatives and ambition in 2010. Besides the realization of the planned projects, we also planned courses and training for the staff. Furthermore, we are expanding our local partnerships with other organizations such as hospitals and universities, so we can prepare the children's hospital for a total integration in the Peruvian society. Besides we will offer possibilities to follow training and courses.

Of course, many thanks go to our Peruvian team in Arequipa and the International Surgery Teams for their tremendous drive, commitment and their unremitting enthusiasm for their work. I thank the board for their support and input during the last year. A very big thank you go to the funds, subsidizers, sponsors, supporters and volunteers who support us morally and financially and hence make our work possible. Please keep on supporting us!

Veel dank, thank you y muchas gracias,
Marjan van Mourik, director

Norma Timoney, plastic surgeon and Ingrid Mertens zur Borg, anaesthetist during a home visit

GOAL

The goal of the foundation is to improve the conditions of life in social and medical areas for children with little economic resources in Peru, as well as all actions that are connected or otherwise are conducive to reach this goal.

Results in 2009

Number of operations 135

Number of operated children – 80

Number of polyclinic consultations 7615

Number of children in food donation projects -125

Number of refunded medical prescriptions-4500

Number of donated surgery kits (drains) - 47

2

2. Message of the Board

Again in 2009, the Foundation PAZ Holandesa succeeded in realizing a number of surgical projects, in the dynamic way we always try to offer aid. The continuous aid of the Foundation is really being appreciated by the people of Peru and our surgical teams return fulfilled from their respective missions.

The board wants to thank everybody involved for the enormous dedication, verve and motivation with which the goals are being achieved. We have faith in the future of Paz Holandesa. The opportunity of being able to offer help to specific groups of children - mainly by giving them a new look- makes the board very grateful.

Prof. Dr. D. Tibboel, pediatrician
Chairman Paz-Holandesa Foundation

3.1 Surgery projects

We realized two plastic surgery projects in the fall of 2009. The first was carried out in October under the guidance of Dr. Norma Timoney and dr. Ron Hiles, both plastic surgeons. Thirty five children received a new smile. In collaboration with dr. Ingrid Mertens zur Borg, Leo Brugman, Karin Beijloos and Leonie Schutter, these children were treated in the Hospital San Juan de Dios. Unfortunately, due to a lack of availability of the operation room, surgery could only be carried out from 7.00 to 12.00 o'clock.

For the second surgery project we had to move to the General Hospital, where in the last two weeks of November plastic surgeon dr. Reinier van Twisk and his team (dr. Jos Geurts, Henri Esman, Ilse van Denderen en Mirjam Sigter) performed surgery on 45 children with a cleft lip, cleft palate or burns. It was the first time that surgery projects have been carried out in this hospital. Thanks to the dedication of the Peruvian team and nurses of the hospital, everything went great. Once more 45 children with a smile!

3.2 Lecturing and training

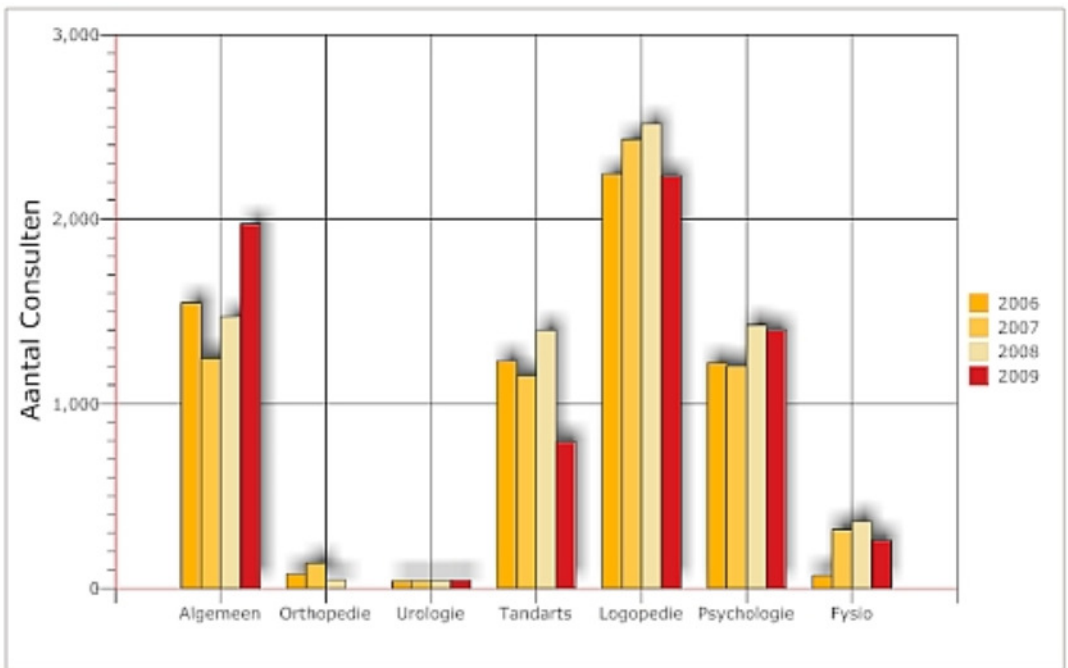

The second plastic surgery project was concluded with a symposium "Late effects of cleft treatment". More than 100 specialists, physicians and nurses attended lecturing of amongst others dr. Reinier van Twisk and made use of the possibility to ask questions.

During the two operation projects, plastic surgeon dr. Jorge Armendariz and children's surgeon dr. Patricia Angulo, received training. For several years now, both doctors participate in the surgery projects. Once the children's hospital is finished and operational, both surgeons will perform surgery independently in our hospital.

3.3 Post surgery care

Post surgery care consists of checkups, speech lessons, dental care and psychological counseling of parents and patients. In addition, monthly informative meetings are held on prevention, nutrition and on how reading, speech and physical therapy exercises can be done at home with the children.

This latter point is in particular important to achieve progress and desired results in the post surgery treatment of the children.

graphic number of consultations 2006-2009

3.4 Donations

For several years now, we weakly donate vegetables, fruits, meat milk and other comestibles to two children's homes in Arequipa.

The children's home Chavez de la Rosa is owned by the council of Arequipa; the food for this home is being supplied by the municipal kitchen. However, the meals are insufficient and do not contain the necessary micronutritions, carbohydrates, protein and minerals which kids in the age of 0 to 12 need. The number of children living in this home are in between 60 and 80, many of them are abandoned or are orphans.

The children's home Sabandya is a private initiative and completely depends on donations. In this home live around 40 mentally and physically disabled children. All these children have been abandoned by their parents, mostly directly after birth and do not even have a birth certificate. Without a birth certificate, these children do not properly exist in Peruvian society and hence don't have any rights on education or medical care and are not eligible for adoption. All the more reason why these children need help.

3.5 Support for hospitals

To all underage patients of the Hospital General and Hospital Goyeneche, who have been declared insolvent and thus cannot afford to pay the medicines and medical materials they need for their treatment or surgery, Paz donates the needed items when these people show their prescription at the polyclinic

3.6 Projects in collaboration with the International Federation of Spina Bifida and Hydrocephalus

Patients with spina bifida often suffer from a neurogene bladder and as a result cannot hold their urine. These children receive a so called urine-continence management training at our hospital. This training teaches children to catheterize a tube so they can control micturation. As a result, they are able to go to school and are more easily accepted socially. In addition, we donate surgery kits with a drain for children with hydrocephalus.

4

4. Projects In 2010

The children's hospital Tony Molleapaza Rojas cannot completely be put in use before the end of 2010 and as a consequence we depend on the availability of operating rooms in local hospitals to organize surgery projects. Therefore we can only organize two operation projects in 2010.

Surgery projects

In the fall of 2010, two plastic surgery projects will take place in the Hospital General. Around hundred patients will be operated in these projects.

Post surgery care

Post surgery care consists of checkups, speech lessons, dental care and psychological counseling of parents and patients. This service will be continued in 2010.

Food donations

The food donations to the children's homes Chavez de la Rosa and Sabandya will be continued.

Donations to hospitals

The donation of medicines and medical materials to insolvent patients of the Hospital General and Hospital Goyeneche will be continued.

Projects in collaboration with IF

The urine-continance management training will be extended with a training on faeces-continance management. In addition, the program in which surgery kits including a drain are donated to patients with hydrocephalia will also be continued.

5

5. 2.The children's hospital 'Tony Molleapaza Rojas'

In the year report 2008 we included graphics on expected surgeries and polyclinical consultations for the year 2009. Unfortunately, we could not realize all of these expectations because we had to stop the construction of the hospital temporarily; pending the decision of the local Government to finish the construction and donate the medical equipment as they had promised. The negotiations continued and several times it seemed that the local government had found a solution to keep their promise, however, all of these solutions were eventually disregarded. Until June 2009 we were able to finance the construction with combined forces. However at this date we had spend all our winnings and had to stop the construction work until further notice. Fortunately, the polyclinical part of the hospital was already finished and we were able to move all polyclinical activities to the Tony Molleapaza Rojas children's hospital.

entrance of the children's hospital

Today, July 2010, the local government has come to a solution to fulfill their promise and it is expected that the hospital can be put into use in the fourth trimester of 2010 and be operational as from the first of January 2011.

The patient is the key figure of the Tony Molleapaza Rojas' children's hospital. The organization will be managed by focusing on processes, with the following crucial points:

- Impartiality: all patients, irrespective of their social background or financial (im)possibility will receive the same high quality medical care;
- Care coordination = multidisciplinary care
- Social care for the family;
- Evidence based practice;
- Digital hospital management processes by means of a software program;
- Programs on prevention
- Involve family and patients in their treatment.
